## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 and 21-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Shankar et al. (U.S. Patent No. 5,526,391).

In reference to claim 1, Shankar discloses in Figure 1 an edge counter comprising: an input receiving an input signal (CLOCK) and an output on which an output signal (OUT) is driven; and a set of logic gates (24; see Figure 2) between the input and output, the logic gates configured to change a state of the edge counter with each transition of the input signal (CLOCK) and to produce an output signal having a cycle corresponding to a predetermined number (which is seen to be the final count value) of transitions of the input signal (see ABSTRACT). The same applies to claim 21 wherein the output signal (OUT) has a 50/50 duty cycle even when the predetermined number is odd (see ABSTRACT).

In reference to claim 2 Shankar discloses in the ABSTRACT that the predetermined number (final value) may be even or odd.

In reference to claim 3 Shankar discloses in Figure 2 wherein a signal path between the input and output through the logic gates includes a sequence of only two logic gates (64, 67). The same applies to claim 22.

In reference to claim 4, Shankar discloses in Figure 1 that the logic gates generate a set of intermediate signals ( $RST_{EVEN}$ ,  $RST_{ODD}$ ), at least one of the intermediate signals changing state in response to transition of the input signal.

In reference to claim 5, Shankar discloses that the edge counter is part of a clock divider. Furthermore wireless receivers comprising clock dividers are well-known in the art of which fact official notice is taken. The same applies to claim 6, wherein wireless communication systems including receivers and transmitters are well-known.

***Allowable Subject Matter***

3. Claims 7-20 are allowed.
4. Claim 23 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: Claim 23 would be allowable because the closest prior art of record fails to disclose a circuit as shown in Figure 2 wherein the sequence of only two logic gates comprises one AND gate and one OR gate in combination with the rest of the limitations of the base claims and any intervening claims.
6. The following is an examiner's statement of reasons for allowance: Claims 7-20 are allowed because the closest prior art of record fails to disclose a method comprising the step of defining a number of intermediate signals sufficient to count a predetermined number of edges and deriving a set of logic gates based on the determined states in

combination with the rest of the limitations of the base claims and any intervening claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
